

Putting Project Management into Practice

2 Days

SIMU

OVERVIEW

A unique opportunity for a hands-on project management experience! Your participants will apply project management skills and techniques in a 'real' project management situation with our new project management simulation workshop. We use the 'SimulTrain' simulation tool to provide the real life project management environment for the participants.

The day itself will involve working as part of a team on a 'real life' project with the 'SimulTrain' project management simulation model, enabling them to apply the theory and manage a project through to conclusion.

DESIGNED FOR

This workshop is ideal for those who are fairly new to project management and want to practice and develop project tools and techniques in a risk free environment. The workshop enables participants to learn by doing and to utilise new skills in a 'real' project environment.

This workshop is available to be delivered exclusively to your organisation and provides a great opportunity to give your project teams the chance to work together in a best practice environment.

Participants should have attended our 'An Introduction to Effective Project Management' course or have equivalent skills and experience.

LEARNING OUTCOMES

During this workshop participants will be able to try out new skills in a risk free 'live' case study.

- Focuses on execution phase of project – often overlooked in traditional courses.
- Promotes collective decision making and team building.
- Balances cost, schedule, quality and human factors.
- Requires real teamwork under time pressure.
